DETAILED ACTION

1. This communication is in response to applicant's 09/12/2000 in the application of Passman et al. for an "Using direct cluster member to cluster member links to improve performance in mobile communication systems".

Election/Restriction

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-17, 19-27 and 29-31 drawn to the method for a communication over free space. Subject matter wherein multiplex communication signals are transmitted over a medium which is not a wire or a waveguide. A waveguide may be used in this communication system for other purpose (e.g., for coupling). Subject matter wherein plural nonmotile base stations provide service to different geographical areas having their boundaries touch each other on a line or a point, classified in **class 370, subclass 310.**
 - II. Claims 18 and 28 drawn to the Bridge or gateway between networks: This subclass is indented under subclass 400. Subject matter having a device for

Art Unit: 2665

interconnecting two or more networks at a media-access level of a data-link layer.

For a bridge which interconnects two or more bus networks wherein the buses have a plurality of terminals connected thereto. For a bridge which interconnects two or more closed transmission path network having a plurality of terminals connected thereto, classified in **class 370, subclass 401**.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II which has separate utility such as having details for a bridge which interconnects two or more closed transmission path network having a plurality of terminals connected, which does not include the particular listed of the invention I, such as details of methods or apparatus for a communication over free space in general. Subject matter wherein the base stations in the geographical area communication system are interconnect by a common communication bus, that allows wireless communication devices to communicate with other wireless communication devices or wired communication devices. See MPEP § 806.05(d).

Art Unit: 2665

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37.CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
